PREFACE

IN preparing a second edition of this work, the first large edition having been exhausted, I have striven to make it, even more than formerly, a reliable guide to those books which treat their subjects on broad lines, and in point of knowledge, research, and reflection approximate to standard value.

While the principles that underlay the compilation of the original work have been strictly adhered to, I have not been unmindful that a colossal war has changed the face of the world, and made all things new. That fact alone has made the task one of abnormal difficulty. Many of the pre-war books no longer suffice, others that still keep their place are out of print, while it is only within the last eighteen months that the books requisite to the new age have begun to appear. Further, the situation was rendered more complicated by a serious crisis, or rather a succession of crises, in the printing trade which increased the cost of production to such an extent that the editorial work for a considerable period had to be entirely suspended. If, therefore, this new edition of *Books That Count* is not without blemishes (and I am fully conscious of them), it ought to be remembered that they are largely attributable to the extraordinary conditions under which the work was prepared.

Not only has the book been carefully revised, but, anticipating a marked revival of industry, it has been deemed advisable to add several new sections, notably *Engineering and Industries*. Fully 500 technical books, presenting concisely and clearly the general aspects of the subjects with which they deal, have been included under these headings, all of them selected by experts. Books relating to the Great War have been for the most part excluded, partly because bibliographies already exist, but more particularly because a large proportion are of ephemeral interest. As it is, the new edition of *Books That Count* embraces 6,000 works, all of them more or less authoritative. Several hundreds have been published during the last three years.

The aim throughout has been to afford guidance to the ordinary reader and the young student in his search for the books that

are likely to be useful to him, and to present a bird's-eye view of their contents. In accordance with this design, *Books That Count* takes note only of works (1) that are in English (together with outstanding foreign books, of which good translations exist); (2) that furnish briefly and pointedly the vital aspects of their subjects; and (3) that are modern in aim and outlook, easily accessible, and purchasable at a moderate price.

The descriptions, which accompany each book noticed, have been specially written for this work after careful examination. They are expository rather than critical, the sole object being to enable the reader to ascertain at a glance the scope and distinctive features of a particular book. In many instances the aim of a work is described in the author's own words. The descriptive notes also furnish useful bibliographical information—the size, number of pages, date, name of publisher, and price. In regard to the last item, the price mentioned is usually taken from the latest catalogue, but, owing to the present instability of prices, it is impossible to guarantee correctness. Wherever doubt existed, the price has been omitted.

As in the former edition, the work is equipped with two full indices (about 12,000 entries), one of Authors and the other of Titles. For easier reference, the columns have been numbered in bold type at the bottom of the page, instead of the ordinary pagination. The figures in the indices denote the column in which an author or the title of a book is mentioned. There is also a table of detailed contents.

While every effort has been made to render *Books That Count* comprehensive and authoritative, I make no claim to finality. Nevertheless, I trust the book constitutes at least an approach to the ideal. It would take up too much space to mention all the experts who have given generous assistance, but I tender acknowledgment of a special debt to the following: J. A. Scott Watson, B.Sc., Professor of Agriculture, Edinburgh University; John Strong, LL.D., Professor of Education, Leeds University; John Goodman, Professor of Civil and Mechanical Engineering, Leeds University; W. Hume Kerr, B.Sc., Lecturer in Engineering Drawing and Structural Design, Edinburgh University; G. Baldwin Brown, Watson Gordon Professor of Fine Art, Edinburgh University; A. B. Searle, Technical Adviser to H. M. Government (Department of Technical Instruction and Board of Trade); Henry C. Wyld, Merton Professor of English Language and Literature, Oxford University; William L. Davidson, LL.D., Professor of Logic and Metaphysics, Aberdeen University; the Very Rev. the Dean of Carlisle (Dr. Hastings Rashdall), and the late Rev. James Hastings, D.D., editor of the *Encyclopædia of*

Religion and Ethics ; J. Arthur Thomson, LL.D., Regius Professor of Natural History, Aberdeen University; and William R. Scott, LL.D., Adam Smith Professor of Political Economy, Glasgow University. These authorities inspected the lists, pertaining to their respective subjects and made many helpful suggestions, though, of course, I accept full editorial responsibility for the form in which each section now appears. I need hardly add that in a work of this kind the duties of an editor must inevitably cover subjects of which his knowledge can be only superficial, and I trust that if inaccuracies occur, those who consult the book will be good enough to send me corrections.

It only remains to tender cordial thanks to the staff of the Advocates' Library, Edinburgh, who, during many months, willingly responded to the unusually heavy demands made upon them. I must also thank my publishers for their unfailing courtesy throughout a protracted and anxious period.

W. FORBES GRAY.

One of the most notable of recent books on the subject. A well-reasoned and lucid survey by one who, while convinced of the divinity of Christ, claims that belief in the Incarnation would gain by the elimination of miracles. The book points to the conclusion that the miracles must be accepted, if at all, as the result of belief in Christianity, and cannot be made the ground of it. See also "Miracles," by W. Lock and others (136 pp. 1911. Longmans.) Contains papers and sermons by Drs. Sanday, Headlam, Scott Holland, etc., dealing with points raised in Mr. Thompson's work.
